# eMAR – Order Tabs, Sorting, and Filters

The eMAR is easier to navigate and find orders with dedicated tabs to sort orders by type, priority sorting, color coding, and an order filter.

Dedicated Tabs keep medication orders front and center.

Priority Sorting and color-coding make STAT, Routine, and PRN orders visible at-a-glance.

- Like STAT orders, PRN orders are now color coded (green)
- The orders are easily identified and will always sort in the order shown below

Order Filter gives you more control over the orders in your view.

- Defaults to **All** orders for that tab
- If you set the filter to something other than All, it will remain constant while logged in and switching from client to client. **Remember** to change filter back to **All** to find all orders for the client.
